Yashwanth Patam

7670971930 royyashwanth52@gmail.com LinkedIn github.com/yashuroy08 Chennai, India

Professional Summary

Java Backend Developer with hands-on experience building scalable REST APIs and server-side applications using Java, Spring Boot, and Spring Security. Proficient in database management with MySQL and MongoDB, JWT-based authentication, and role-based access control (RBAC). Familiar with Agile development practices, CI/CD pipelines, and microservices architecture. Strong foundation in object-oriented programming, system design, and delivering reliable, secure backend systems.

Education

Saveetha School of Engineering **Chennai, India**
Bachelor of Engineering in Computer Science & Engineering *2023 – 2027 (Expected)*

Technical Skills

Languages: Java, SQL,Python
Backend & Frameworks: Spring Boot, Spring Security, Hibernate / JPA, REST APIs
Databases: MySQL, MongoDB
DevOps & Cloud: Git, GitHub, Vercel, Render, Cloudflare
Build Tools & Testing: Maven, Gradle, JUnit, Postman

Professional Experience

AI Intern **Aug 2025 – Dec 2025**
LearnFlu *Remote*

- Built predictive analytics models achieving 85% accuracy on 10,000+ data points using Python and TensorFlow.
- Improved training pipeline efficiency by 30% through optimization on Azure ML.
- Assisted in backend development by integrating server-side applications and APIs for model deployment.
- Worked on data pipelines, improving system reliability, debugging issues, and optimizing data flow between services.

Technical Projects

E-Commerce Backend Service | GitHub | Live
Java, Spring Boot, MongoDB *2025*

- Built 10+ RESTful APIs with Spring Boot for order processing, user management, and product catalog operations.
- Secured endpoints using JWT authentication and RBAC via Spring Security with least-privilege access control.
- Optimized MongoDB queries to reduce response latency on high-frequency read operations.
- Deployed on Render/Vercel with a modular, microservices-inspired architecture.

Advanced RBAC System | GitHub
Spring Boot, Spring Security, JWT, MySQL, JPA *2026*

- Designed dynamic authorization system with Spring Boot and Spring Security supporting multi-role, fine-grained permissions.
- Implemented stateless JWT with token validation and expiry handling across REST API endpoints.
- Validated role logic using JUnit unit tests, reducing regression risk.
- Debugged authorization edge cases to improve request reliability and security posture.

Certifications & Achievements

- **Oracle Database Specialist Certification** — Oracle *Nov 2024*
- **1st Prize — Hackathon for AI-Powered Computer Vision Application** — SSE *2024*
